

## **Vogue/Classical Panel Radiator HB-R88 Series**

**(Material: Steel)**

---

Panel Radiator is designed with high volume water circulation canals which give maximum heat capacity. Our Panel Radiator is with top grilles and side covers with a perfect surface to prevent dust. Panel Radiator is easy to clean.

For the floor heating and floor installed pipes, fitting can be fixed with compact valve radiators. Heating control system can be fixed separately on each Panel radiator with an addition of thermostatic regulator valve. Input and output fitting can be fixed at either side of the Panel radiator (right side or left side) depending on the installation requirement. Since installation pipes are not visible extremely, elegant and aesthetic appearance is provided as well as productive and economic heating.
